

Bike Sales Dashboard – Excel Project

Project Overview

The Bike Sales Dashboard is an interactive Excel dashboard created to analyse customer purchasing behavior and identify the factors influencing bike purchases. The project uses customer demographic and lifestyle data to uncover trends related to income, age, commuting distance, education level, marital status, and region.

The dashboard helps businesses understand which customer segments are more likely to purchase bikes and supports data-driven decision-making for marketing and sales strategies.

Objective

The primary objective of this project is to analyse customer data and identify patterns among individuals who purchase bikes. The analysis focuses on answering questions such as:

- Do customers with higher incomes purchase more bikes?
- How does commuting distance affect bike purchases?
- Which age groups are more likely to buy bikes?
- Does education level influence bike purchasing behaviour?
- How do marital status and region impact sales?

Tools Used

- Microsoft Excel
- Pivot Tables
- Pivot Charts
- Slicers
- Data Cleaning and Transformation
- Dashboard Design

Dashboard Features

Income Analysis

Analysed the average income of customers based on gender and bike purchase status.

Key Insight:

Customers who purchased bikes generally have higher average incomes compared to those who did not purchase bikes.

Commute Distance Analysis

Examined the relationship between commuting distance and bike purchases.

Key Insight:

Customers traveling shorter distances are more likely to purchase bikes, while bike purchases decrease as commuting distance increases.

Age Group Analysis

Customers were categorized into age brackets such as Adolescent, Middle Age, and Old.

Key Insight:

Middle-aged customers represent the largest group of bike buyers.

Interactive Filtering

Added slicers for:

- Marital Status
- Region
- Education Level

These filters allow users to dynamically explore the data and analyze specific customer segments.

Key Findings

- Higher-income customers show a greater tendency to purchase bikes.
- Middle-aged individuals are the most active bike buyers.
- Customers with shorter commute distances purchase bikes more frequently.
- Bike purchasing behavior varies across different educational backgrounds, regions, and marital statuses.
- Interactive slicers make the dashboard easy to use and support deeper analysis.

Skills Demonstrated

- Data Cleaning
- Data Analysis
- Dashboard Development
- Pivot Table Creation
- Pivot Chart Visualization
- Interactive Reporting
- Business Insight Generation
- Excel Data Modeling

Conclusion

This project demonstrates how Excel can be used to transform raw customer data into meaningful business insights. By leveraging Pivot Tables, Charts, and Slicers, the dashboard provides a clear and interactive view of customer purchasing behavior, helping stakeholders understand the key factors that influence bike sales.
